1.1.3 Block comment

```
\begin{comment} ... \end{comment}
```

```
Text 1

begin{comment}

This part will be ignored.

end{comment}

Text 1

Text 2
```

1.2 listings

\usepackage{listings}

1.2.1 Inline code

\lstinline!<text>! ("|" can be replaced by any character)

```
\lstinline|Hello, world!| Hello, world!
```

1.2.2 Code block

\begin{lstlisting} ... \end{lstlisting}

```
begin{lstlisting}
def hello():
    print("Hello, world!")
    lend{lstlisting}

def hello():
    print("Hello, world!")
```

1.2.3 Input file

\lstinputlisting{<file-path>}

```
def hello():
print("Hello, world!")
```

1.3 minted

\usepackage{listings}

Minted uses Pygments for syntax highlighting.

Install Python and then Pygments.

```
$ pip install Pygments
```

To use Pygments on LATEX, you need to pass -shell-escape flag to LATEX.

```
1 $ lualatex -shell-escape <file>
```

If you want to compile LATEX document containing minted with Visual Studio Code and LaTeX Workshop Plugin, add the following to settings.json.

```
"latex-workshop.latex.tools": [
2
3
          "name": "lualatex",
          "command": "lualatex",
          "args": [
            "-shell-escape",
            "-synctex=1",
            "-interaction=nonstopmode",
            "-file-line-error",
10
            "%DOC%"
11
          ],
12
          "env": {}
13
       },
15
          "name": "bibtex",
16
          "command": "bibtex",
17
          "args": [
18
            "%DOCFILE%"
19
20
          "env": {}
21
       }
22
     ],
23
     "latex-workshop.latex.recipes": [
24
          "name": "lualatex",
26
          "tools": [
27
            "lualatex"
28
          ]
29
       },
30
31
          "name": "lualatex -> bibtex -> lualatex * 2",
32
          "tools": [
33
            "lualatex",
34
            "bibtex",
35
            "lualatex",
36
            "lualatex"
37
          ]
```

1.3.1 Inline code

\mintinline{<language>}{<text>}

1.3.2 Code block

For single line: \mint{<language>}{<text>}

```
1 \mint{python}{
2 print("Hello, world!")
3 }
1 print("Hello, world!")
```

For multiple lines: \begin{minted} ... \end{minted}

```
begin{minted}{python}
def hello():
    print("Hello, world!")
    \end{minted}

print("Hello, world!")
```

1.3.3 Input file

\inputminted{<language>}{<file-path>}

```
\lambda \inputminted{python}{\lambda python} \lambda \lambda p \rangle \lambda p \rangle \lambda \lam
```

1.3.4 Captions and labels

Minted provides floating listing environment to use with caption and label.

```
begin{listing}[H]

mint{python}|print("Hello,
 world!")|

caption{Code example}

label{lst:example}

lend{listing}

| Listing 1: Code example
```

1.3.5 Options

Setting global minted options

inline & code blocks

```
\setminted{<options>}
\setminted[<language>] {<options>}
```

inline

```
\setmintedinline{<options>}
\setmintedinline[<language] {<options>}
```

Defining shortcuts

minted environment

mint command

```
1  \newmint{<language>}{<options>} % default macro-name: <language>
2  \newmint[<macro-name>]{<language>}{<options>}
3
4  \macro-name>/<text>/ % ``/'' can be replaces by any character
```

mintinline command

inputminted command

```
newmintedfile{<language>}{<options>} % default macro-name:

→ <language>file
```

```
2 | \newmintedfile[<macro-name>] {<language>} {<options>}
3
4 | \macro-name>{<file-path>}
```

Available options

- autogobble (boolean): Remove gobble (leading whitespace)
- breaklines (boolean): Automatically break long lines
- frame (none | left line | topline | bottomline | lines | single): Put lines around the code
- linenos (boolean): Linen numbers
- numbersep (dimension): Gap between numbers and start of line

```
\setminted{
autogobble,
autogobble,
breakanywhere,
breaklines,
frame=single,
linenos,
numbersep=2mm,
}
```
